Subject: Application for Senior Design Engineer, AI Platform

Dear Hiring Manager,

To be completely honest, I won't claim to be superior to every applicant in your candidate pool. Instead, I offer something concrete: a proven commitment to hands-on execution, a relentless bias for action when faced with missing tools or data, and an eagerness to take on complex technical challenges.

During my first internship at LA Consulting Corp in my second year, I transformed my understanding of Computer Vision from academic theory into practical application. I was tasked with building an Intelligent Traffic Violation Detection System (TVS)—which was subsequently approved as my university Final Year Project. When I started, there were no public datasets that reflected actual local road conditions in Karachi. Rather than scaling back the scope or switching topics, I took a camera across the city, captured real-world footage, and manually labeled over 4,000 images across two custom datasets. That experience defined an engineering core principle I adhere to strictly: missing data or tools is never an excuse to stall—you go out and build what is missing.

My time at the State Bank of Pakistan further expanded my operational versatility. Interacting with leaders managing our national economy was an intense experience. Given significant trust and autonomy, I managed and organized their Employee Wellness event. Additionally, I contributed to a core service remodeling project under a non-disclosure agreement. Working in a high-stakes environment taught me how to operate with discretion, accountability, and adaptability.

Beyond professional roles, my competitive experience highlights my drive for continuous learning. I achieved 3rd place at the Al-Khair Hackathon (sponsored by Duality), 5th place at the IBA Hackathon, earned Gold in Google AI Seekho (qualifying for Phase 2), and learned LangChain on the fly during the FAST Hackathon. Internationally, I have competed in the Alibaba Hackathon, IBM Bob 2.0, and the AMD Developers Hackathon.

If I were to pinpoint my single strongest attribute, it is that I am fearless when it comes to learning—give me a problem or tool I have never seen before, and I will find a way to master it and solve the issue.

I recognize that resume descriptions only capture a portion of candidate capability. I welcome the opportunity to prticipate in a trial run or practical assessment so you can evaluate my skills and work ethic firsthand.

Thank you for your time and consideration.

Sincerely,
Syed Muhammad Shariq
